

POWER PULLEY PANIC

COMPLETE OBJECT CATALOG

83 visible gameplay objects - generated from the current game source

Illustrations use shipped art where available and procedural diagrams matching the in-game industrial style.

Catalog Scope

This catalog lists every visible gameplay object represented by the current Level, Machine, Fluid, GuideObject, Player, and runtime projectile/debris systems. True aliases are merged, while runtime-created objects remain separate entries. Nonvisual configuration records and implementation-only components are excluded.

Sections

Actors 2 objects	World 14 objects	Classic Machines 23 objects
Physics Objects 16 objects	Power and Sensors 7 objects	Forces and Motion 6 objects
Hazards 5 objects	Gameplay Items 4 objects	Fluids 6 objects

How to read each entry

1. The colored header identifies the gameplay category.
2. The monospace line gives the level record or notes that the object is created at runtime.
3. The illustration shows the object's recognizable in-game form or behavior.

Player

ACTORS

Runtime actor

Controllable worker with walking, climbing, swimming, jumping, pushing, interaction, air, and hazard states.

Enemy Robot

ACTORS

enemy

Patrolling physics-aware enemy that collides with the world, flexible bodies, fluids, buttons, and players.

Floor / Solid

WORLD

solid

Primary static collision geometry, rendered from the industrial floor, wall, ceiling, and fill tiles.

Platform

WORLD

platform

A compact static ledge used for traversal, machinery support, and fluid obstacles.

Ladder

WORLD

ladder

Climbable vertical route that supports multiple ladder shafts in a single level.

Ramp

WORLD

ramp

A fixed-angle inclined surface used by players and round or rectangular physics bodies.

One-Way Platform

WORLD

`oneWayPlatform`

Supports falling bodies from above while allowing movement upward through its underside.

Guide Rail

WORLD

`guideRail`

Static mechanical rail used to frame or constrain moving assemblies.

Darkness Zone

WORLD

`darkness`

A rectangular blackout region whose visibility responds to the level's machine power.

Level Sign

WORLD

`label`

Pixel-aligned wall signage used to identify rooms and test stations without affecting collision.

Exit Door

WORLD

`exit`

Tracked industrial shutter that raises over time and exposes an outdoor doorway when unlocked.

Outdoor Doorway

WORLD

`Runtime doorway`

Scenic world beyond an open exit, including sky, distant terrain, and the threshold path.

Checkpoint

WORLD

checkpoint

Updates the player's respawn position when touched and visually changes after activation.

Breakable Tile

WORLD

breakableTile

Floor tile that cracks under a player, fails after a delay, and spawns falling fragments.

Breakable Debris

WORLD

Runtime debris

Short-lived fragments emitted by a broken tile; affected by gravity, wind, and fluids.

Spike Hazard

WORLD

spikeHazard

Static row of sharpened metal spikes that immediately defeats a touching player.

Winch

CLASSIC MACHINES

Runtime machine

Player-operated carriage that turns the factory pulley network and converts movement into machine power.

Pulley

CLASSIC MACHINES

pulley

Grooved wheel used by rope routes, counterweights, factory drives, and compound pulley layouts.

Classic Machines

Hanging Weight

CLASSIC MACHINES

weight

Counterweight suspended from a pulley; oscillates with machine phase and acts as a hazard.

Rotary Latch

CLASSIC MACHINES

rotaryLatch

Spinning wheel lock that must be aligned and secured to complete a gate circuit.

Valve

CLASSIC MACHINES

valve

Interactable hand wheel that controls water filling or shuts off a neurotoxin leak.

Flood Pump

CLASSIC MACHINES

Runtime pump

Pipe, outlet, and pump assembly that visualizes valve-driven water delivery.

Stone Block

CLASSIC MACHINES

stoneBlock

Heavy pushable block with high friction, low bounce, fluid response, and button weight.

Boulder

CLASSIC MACHINES

boulder

Massive rolling stone with angular momentum, ramp response, and projectile shielding.

Physics Wheel

CLASSIC MACHINES

physicsWheel

Loose wheel with lower rolling resistance and stronger rotational coupling than a boulder.

Gear

CLASSIC MACHINES

gear

Dynamic toothed wheel that rolls, meshes with screw grooves, and carries angular velocity.

Flywheel

CLASSIC MACHINES

flywheel

Heavy rimmed wheel that stores rotational energy and resists abrupt speed changes.

Steering Wheel

CLASSIC MACHINES

steeringWheel

Hand wheel intended for valves and mechanisms that need direct player turning.

Screw

CLASSIC MACHINES

screw

Rotating helical shaft that conveys contacting bodies and mechanically couples to a matching gear.

Fan

CLASSIC MACHINES

fan

Powered rotor that emits directional wind with configurable range, width, strength, and power.

Classic Machines

Wind Stream

CLASSIC MACHINES

Runtime force field

Visible streaks and a directional force volume generated by a fan.

Pinwheel

CLASSIC MACHINES

pinwheel

Light rotor whose spin rate responds directly to local wind velocity.

See-Saw

CLASSIC MACHINES

seeSaw

Hinged balance beam that tilts from player and object mass around a central fulcrum.

Trap Door

CLASSIC MACHINES

trapDoor

One-sided hinged floor door with two external rings for ropes and chains.

Chain

CLASSIC MACHINES

chain

Alternating front and side links simulated as a flexible collision body with detachable endpoints.

Physics Rope

CLASSIC MACHINES

physicsRope

Segmented rope with gravity, collision, fluid response, and player-controlled endpoint attachment.

Button

CLASSIC MACHINES

`button`

Pressure plate activated by players, enemies, flexible bodies, and movable physics objects.

Arrow Trap

CLASSIC MACHINES

`arrowTrap`

Timed launcher that emits arrows along a cardinal direction at a configured speed.

Arrow Projectile

CLASSIC MACHINES

`Runtime projectile`

Wind- and fluid-responsive projectile that stops on solids and defeats players on contact.

Ball

PHYSICS OBJECTS

`ball`

Light, bouncy circular rigid body with rolling motion and mass-aware collisions.

Barrel

PHYSICS OBJECTS

`barrel`

Pushable dynamic barrel with moderate bounce, friction, and full rigid-body interactions.

Moving Platform

PHYSICS OBJECTS

`movingPlatform`

Kinematic platform that travels along a configurable axis and carries standing players.

Elevator

PHYSICS OBJECTS

elevator

Vertical kinematic platform with a configurable travel distance and speed.

Pendulum Bob

PHYSICS OBJECTS

pendulumBob

Mass suspended from a fixed pivot and animated along a pendulum arc.

Ceiling Hook

PHYSICS OBJECTS

ceilingHook

Fixed overhead attachment point for flexible bodies and hanging mechanisms.

Spring

PHYSICS OBJECTS

spring

Elastic constraint that pulls an attached body toward its rest length with damping.

Rod

PHYSICS OBJECTS

rod

Rigid distance constraint that preserves length and removes radial velocity.

Fixed Joint

PHYSICS OBJECTS

fixedJoint

Locks a nearby loose body to a fixed world-space attachment point.

Physics Objects

Crank

PHYSICS OBJECTS

crank

Rotating wheel with an offset handle for converting circular input into mechanical motion.

Ratchet

PHYSICS OBJECTS

ratchet

One-direction rotary mechanism with a visible pawl and nonnegative rotation.

Clutch

PHYSICS OBJECTS

clutch

Engageable rotary coupling that can transmit or interrupt rotation.

Brake

PHYSICS OBJECTS

brake

Friction volume that rapidly damps the velocity of overlapping dynamic bodies.

Cam

PHYSICS OBJECTS

cam

Eccentric rotating lobe used to create repeating offset motion.

Conveyor Belt

PHYSICS OBJECTS

conveyorBelt

Animated moving surface that transports players and influences their velocity.

Turntable

PHYSICS OBJECTS

turntable

Rotating horizontal disk that applies tangential motion to contacting players.

Battery

POWER AND SENSORS

battery

Steady power source that energizes every compatible object on its channel.

Electric Motor

POWER AND SENSORS

electricMotor

Powered rotor that converts channel power into continuous angular motion.

Limit Switch

POWER AND SENSORS

limitSwitch

Contact sensor with a mechanical lever that energizes its channel when triggered.

Relay

POWER AND SENSORS

relay

Channel-controlled electrical switching block used to pass a power signal.

Fuse

POWER AND SENSORS

fuse

Protective link that breaks when supplied power exceeds its configured capacity.

Speed Sensor

POWER AND SENSORS

`speedSensor`

Trigger volume that activates only when a player or body exceeds a minimum speed.

Beam Sensor

POWER AND SENSORS

`beamSensor`

Directional optical beam that detects players and loose bodies crossing its path.

Magnet

FORCES AND MOTION

`magnet`

Radial force source that attracts nearby players and loose bodies when powered.

Piston

FORCES AND MOTION

`piston`

Powered kinematic ram that repeatedly extends along a configured direction.

Hydraulic Cylinder

FORCES AND MOTION

`hydraulicCylinder`

Slower high-power linear actuator with a visible cylinder and extending rod.

Rocket Thruster

FORCES AND MOTION

`rocketThruster`

Directional exhaust volume that accelerates players and dynamic objects.

Oil

FORCES AND MOTION

oil

Slippery floor volume that preserves horizontal momentum and reduces traction.

Mud

FORCES AND MOTION

mud

Viscous floor volume that strongly damps horizontal and vertical movement.

Crushing Block

HAZARDS

crushingBlock

Kinematic spiked block that travels along a path and defeats players on contact.

Swinging Hammer

HAZARDS

swingingHammer

Heavy pendulum hazard with a thick handle and damaging hammer head.

Saw Blade

HAZARDS

sawBlade

Fast rotating toothed hazard that can also patrol along a configured path.

Steam Vent

HAZARDS

steamVent

Periodic directional jet that visibly pushes players and loose objects.

Electrical Arc

HAZARDS

`electricalArc`

Intermittent powered lightning connection that damages players crossing the beam.

Collectible

GAMEPLAY ITEMS

`collectible`

Touch pickup represented by a bright token; disappears once collected.

Key

GAMEPLAY ITEMS

`key`

Golden key pickup reserved for locks, gates, and future keyed mechanisms.

Breakable Crate

GAMEPLAY ITEMS

`breakableCrate`

Dynamic wooden crate that breaks after a sufficiently hard impact.

Explosive Barrel

GAMEPLAY ITEMS

`explosiveBarrel`

Red dynamic barrel that detonates after a severe impact and creates a brief blast hazard.

Water

FLUIDS

`water`

Cellular fluid with pressure, leveling, splashes, buoyancy, drag, and object displacement.

Fluids

Sand

FLUIDS

sand

Granular cellular material with gravity, diagonal flow, friction, and surface avalanching.

Gel

FLUIDS

gel

Particle fluid with persistent bonds that stretches, wobbles, and attempts to recover its shape.

Gas

FLUIDS

gas

Buoyant particle fluid that diffuses through rooms, responds to fans, and can be vented through doors.

Water Pit

FLUIDS

waterPit

Legacy rectangular water reservoir with a controllable surface height and fill target.

Neurotoxin Leak

FLUIDS

toxinLeak

Valve-controlled gas emitter with animated pipework, exposure, air depletion, and door exhaust.
